For the big, the small and everything in between, Design Inc build effective websites for businesses who want to get the most from their online marketing.

Design Inc is an award-winning UK-based digital creative agency providing our clients with modern, forward thinking websites and eCommerce solutions.

We blend strategy, creativity & technology combining to improve the way a website works for our clients’ audience.

We have been building websites for 20 years. That is a long time for this media and, during that time, websites have changed dramatically. Not just in the build and functionality, but also in the way that the end user interacts with the website. By understanding how different browsers, viewing devices, competition, search engines, content management, security, etc can all affect the user experience, we can keep one step ahead of the competition.

The result: outstanding websites that work hard to attract relevant enquiries.

Whether you are looking for a good looking, hard working website to promote your services, sell your products or simply attract truly relevant enquiries, we can help. The following pages will provide an insight into some of our more recent work.

Forecasting

Evidence-based forecasting is an approach to forecasting that involves building frameworks that are based on:

- Facts rather than opinions
- Validated techniques not protected secrets or gateways
- Simple, transparent, and built on a foundation of data

Our evidence-based forecasting is contained in the book *Sales Forecasting for Pharmaceutical Sales* by Evidence-Based Approach consultant Gary Johnson. A number of years ago, evidence-based forecasting was unheard of. This book was the first to help pull together an evidence-based approach to forecasting in the pharmaceutical industry.

“Europe’s most respected pharma forecasting specialist consultancy.”

CEO for Executives

What can evidence-based insights do for you?

For decades, pharmaceutical companies have used the optimum sales forecasting models to predict the future of their products. These models are based on scalable, transparent logic that has been validated for use in the pharmaceutical industry.

If you are interested in how evidence-based insights are working for you, please contact us. We would be happy to discuss how we can help you.

Sales Forecasting for Pharmaceuticals

Initial investors Touchstone Innovations and Norner Verdandi to develop the current technology for commercial applications. A further investment in 2013 by Jetstream Capital and Imperial Innovations has been used to scale up and commercialise the technology. Investment has continued into 2018 with the addition of Woodford Investment Management.

Econic Technologies moved its business operations to Alderley Park, Cheshire, in January 2017. This move will enable further scope for expansion and progression at all levels of the company.

Turning CO₂ waste into a benefit for business and our planet

We develop novel catalysts for polymerization and partner with existing manufacturers to help them scale their products using carbon dioxide (CO₂) as a key ingredient. Tracking back to a waste product that may otherwise have been released into the environment, CO₂ is being recycled into the CO₂ polymer.
